

RGCS Crystal Certification Sheet

Specimen CRY-NODES-001

Photograph / diagram

diagram placeholder — no image supplied for this specimen

Entered measurements

specimen ID	CRY-NODES-001
material family	quartz
length (mm)	110
width (mm)	unavailable
diameter (mm)	32
facet count	6
termination angle (deg)	51.7
mass (g)	232
measured nodes (mm)	27.5, 55, 82.5

Derived geometry

aspect ratio	3.4375
length/diameter ratio	3.4375
termination angle status	within 5 deg of the 51.7 deg reference
volume estimate (cm^3)	88.4672
volume model	right circular cylinder (model estimate)
density (g/cm^3)	2.62244
density check	computed 2.62 g/cm3 vs reference 2.65 — consistent within 25%

Mode estimates (model outputs)

axial half-wave (Hz)	26000
mode model	f = v/(2L) with v=5720 m/s (quartz); model estimate, not a measurement

Uncertainty

length uncertainty (mm)	0.5
width uncertainty (mm)	0.5
angle uncertainty (deg)	1

Provenance

entered_by	fixture operator
method	calipers + protractor
supplier	fixture supplier
operator	fixture operator

Claim boundary

This sheet records measured inputs, derived geometry, model estimates, and provenance. It does not by itself validate an anomalous physical effect.
